EDERLYN H. CAPARAS
BSIT 2-3

OBJECT ORIENTED PROGRAMMING
SEVERINO M. BEDIS JR.

Midterm Activity #5: *Personal Expense Tracker*

General Instructions

1. Create a Java program named ExpenseTrackerLastName.
2. Implement the following methods:
- A void method that displays the program title.
- A non-void method that calculates the total expenses using three values:
  - food
  - transportation
  - other expenses
- A non-void method that checks if the total expense exceeds a budget and returns a message.
- A void method that displays the total expense and the budget status.

3. In the main method:
- Call all the methods you created.
- Display the final output clearly.

4. Use appropriate method names, parameters, and return types.

5. Add at least TWO enhancement:
- Accept user input
- Add another expense category
- Compute remaining budget
- Display a personalized message

6. Ensure your program:
- Compiles without errors
- Produces correct output

Submission Format
- Submit the Java source code file (.java).
- The filename must follow this format: ExpenseTrackerLastName.pdf or ExpenseTrackerLastName.docs
- Include screenshots of the program output showing the following:
  - User input
  - Program processing
  - Final output/result
- The screenshot must clearly display the entire console output.

Academic Integrity Policy
- Students must write their own program.
- The following are not allowed:
  - Copying code from classmates.
  - Sharing source code.
  - Downloading solutions from the internet.
- Students with identical programs may receive a score of 0.
