Midterm Seatwork # 2

SOURCE CODE:

```
import java.util.Scanner;

public class SmartWalletSystemCaparas {
    public static void main(String[] args){
        Scanner scanner = new Scanner(System.in);

    double balance = 5000.0;
    int transactionCount = 0;
    boolean isRunning = true;

    while (isRunning){
        System.out.println("\n==== SMART WALLET MENU ====");
        System.out.println("1. View Balance");
        System.out.println("2. Cash In");
        System.out.println("3. Send Money");
        System.out.println("4. Exit");
        System.out.println("Choice: ");

int choice = scanner.nextInt();

switch (choice) {
    case 1:
        System.out.println("Output: Balance = " +(int)balance);
        transactionCount++;
        break;
```

Scanned with CamScanner

```
case 2:
    System.out.print("Cash In: ");
    double deposit = scanner.nextDouble();
    balance += deposit;
    transactionCount++;
    System.out.println(" Output: New Balance = " (int)balance);
    break;

case 3;
    System.out.println(" Output: Below minimum amount");
  } else if (sendAmount > 1500) {
    System.out.println(Output: Exceeds maximum amount");
  } else if (sendAmount > balance) {
    System.out.println("Output: Amount exceeds current balance");
  } else {
    balance -= sendAmount;
    transactionCount++;
    System.out.println("Output: New Balance = " + (int)balance);
  }
  break;

case 4;
    isRunning = false;
    System.out.println("In Transaction Count: " + transactionCount);
    break;

default;
    System.out.println("Invalid choice, try again.");
  }
}
scanner.close();
}
```

Scanned with CamScanner

Excution:

==== SMART WALLET MENU ====

1. View Balance
2. Cash In
3. Send Money
4. Exit

Choice: 1

Output: Balance = 5000

==== SMART WALLET MENU ====

1. View Balance
2. Cash In
3. Send Money
4. Exit

Choice: 2

Cash In: 2000

Output: New Balance = 7000

==== SMART WALLET MENU ====

1. View Balance
2. Cash In
3. Send Money
4. Exit

Choice: 3

Send Money: 2000

Output: Exceeds maximum limit

CS Scanned with CamScanner

==== SMART WALLET MENU ====

1. View Balance
2. Cash In
3. Send Money
4. Exit

Choice : 4

Transaction Count : 2

Short Explanation (3-5 sentences)

- How the while loop keeps the program running
- How switch-case controls menu selection
- How if-else validates transactions

ANSWER:

The "while" loop serves as a continuous loop, repeatedly displaying the menu and reading input. This ensures that the program terminates when the exit flag is activated. The switch-case statement serves as a menu controller, allowing the program to efficiently execute a specific block of code (View, Cash In, Send Money) depending on the user's chosen option. The if-else statement acts as validation checks, ensuring that transaction is within the minimum, maximum, and available balance limits before updating the balance and transaction count.
