OBJECT ORIENTED PROGRAMMING

Midterm Seatwork #3: Student Age Analyzer

Instructions

Create a Java program that evaluates a student's final grade using:
• Scanner (for user input)
• User-defined methods
• Control structures (if-else / switch)

Program Requirements

1. Create a Java class named:
StudentAgeAnalyzerLastName
(Example: StudentAgeAnalyzerBedis)

2. Ask the user to input:
o Student Name
o Age

3. Use a user-defined method to:
o Determine the age category

4. Use if-else conditions:
Age Range Category
0–12 Child
13–19 Teenager
20–59 Adult
60 above Senior Citizen

BSIT 2-3 — Midterm Seatwork #3: STUDENT AGE ANALYZER

Sorce Code:

```java
import java.util.Scanner;

public class StudentAgeAnalyzer {
    public static void main(String[] args) {
        Scanner input = new Scanner(System.in);
        String choice;

        do {
            System.out.print("Enter Student Name: ");
            String name = input.nextLine();

            System.out.print("Enter Age: ");
            int age = input.nextInt();

            input.nextLine();

            String category = getCategory(age);

            System.out.println("\n==== Student Analysis ====");
            System.out.println("Student Name: " + name);
            System.out.println("Age: " + age);
            System.out.println("Age Category: " + category);
            System.out.println("==========\n");
            System.out.print("Do you want to continue? (yes/no): ");
            choice = input.nextLine();
            System.out.println();
        } while (choice.equalsIgnoreCase("yes") || choice.equalsIgnoreCase("y"));

        System.out.println("end here.");
        input.close();
    }

    public static String getCaterery(int age) {
        String result;

        if (age >= 1 && age <= 12) {
            result = "Child";
        } else if (age >= 13 && age <= 19) {
            result = "Teenager";
        } else if (age >= 20 && age <= 59) {
            result = "Adult";
        } else if (age >= 60) {
            result = "Senior Citizen";
        } else {
            result = "Invalid Age";
        }

        return result;
    }
}
```

Scanned with CamScanner

OUTPUT:

```
Enter Student Name: luffy
Enter Age: -1

==== Student Analysis ====
Student Name: luffy
Age: -1
Age Category: Invalid Age
==========================

Do you want to continue? (yes/no): yes

Enter Student Name: zoro
Enter Age: 10

==== Student Analysis ====
Student Name: zoro
Age: 10
Age Category: Child
==========================

Do you want to continue? (yes/no): yes

Enter Student Name: nami
Enter Age: 30

==== Student Analysis ====
Student Name: nami
Age: 30
Age Category: Adult
==========================

Do you want to continue? (yes/no): yes

Enter Student Name: sanji
Enter Age: 19

==== Student Analysis ====
Student Name: sanji
Age: 19
Age Category: Teenager
==========================

Do you want to continue? (yes/no): yes

Enter Student Name: chopper
Enter Age: 60
```

```
==== Student Analysis ====
Student Name: chopper
Age: 60
Age Category: Senior Citizen
============================

Do you want to continue? (yes/no): no

end here.
```
